| Chief Executive Officer of the Capgemini Group

“
I am convinced that Generative AI
will play a major role in accelerating
the transition to a digital economy.
But it must be deployed
responsibly, reliably, and
sustainably in order to fully unleash
its potential and enhance creativity.
”

AIMAN EZZAT

As a global leader in Data & AI Capgemini can guide clients through their GenAI Transformation journey

Use cases with Industrialized delivery assets

4
GenAI **offerings** launched

- GenAI Strategy
- Custom GenAI for Enterprises
- GenAI for CX
- GenAI for Software Engineering

Dedicated
AI Futures Lab

Starting with the 4 already-launched GenAI offers

GenAI Strategy

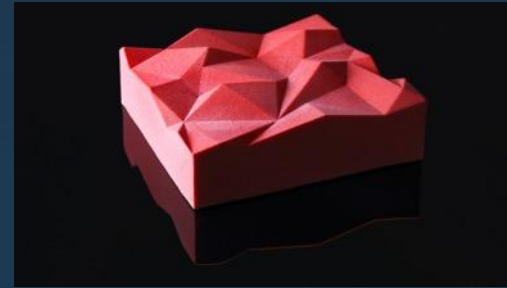

Enabling CXOs to define and prioritize the most relevant generative AI use cases for their business, demonstrate the tangible value that can be achieved, and lay the right foundations in terms of people, process and technology for scaling their generative AI investments while mitigating the risks.

GenAI for Customer Experience

Enhancing customer experience with 4 dedicated generative AI assistants. It allows hyper-personalized customer experience with a synthetic design assistant, elevates customer self-service with personalized chatbots, augments customer care services with a content and knowledge assistant and boosts sales teams performance with a product & offers knowledge assistant.

GenAI for Software Engineering

Improving efficiency and quality across the whole software life cycle (from design and coding to documentation, testing, deployment, and operations), accelerate the time to market for new software, and reduce the technical debt of enterprises by facilitating large modernization programs of legacy software. It also enables increased security with a reduced attack surface by automatically identifying bugs or vulnerabilities and proposing adjustments to software development teams.

Custom GenAI for Enterprises

Enabling enterprises to have custom Generative AI assistants fine-tuned with their data and tailored to their business context, in order to get maximum value impact on company-specific tasks. These customized models create unique and reliable outputs and help organizations accelerate on many fronts – from customer experience to R&D, from assisting business and support functions to increasing performance, with the implementation of consistent guardrails and following an industrial approach to optimize the overall cost of the solution.

Gen AI partnerships (1/4)

Expanded strategic collaboration with **AWS** to enable broad enterprise Gen AI adoption.

The expanded collaboration is designed to help organizations accelerate the implementation of Gen AI at scale while significantly enhancing return on investment and is leveraging Capgemini's existing network of AWS CoEs.

Global Group

Capgemini and **Microsoft** are collaborating to transform industries with accelerated Gen AI implementations.

Co-development of Azure Intelligent App Factory that aims to empower organizations to scale Gen AI capabilities and maximize AI investments by getting them into production faster, with ethical AI at the core.

Global Group

Expansion of long-standing partnership with **Google Cloud** to create first-of-its-kind Gen AI CoE to accelerate client value. Capgemini is using Google Cloud's Gen AI technologies to develop a library of 500+ enterprise-ready industry use cases.

Capgemini awarded the 2024 Google Cloud Global Industry Solution Partner of the Year award for Gen AI services.

Global Group

Capgemini and **Salesforce** are collaborating to enable a new era of Gen AI powered customer experiences.

Introduction of Generative AI for CX Foundry, which helps clients using Salesforce drive value across the customer lifecycle and deliver personalized experiences.

Global Group

Gen AI partnerships (2/4)

Capgemini and **NVIDIA** are collaborating globally to combine deep industry expertise with accelerated computing solutions.

With wins in life sciences and automotive, we aim to bring Gen AI and immersive experience use cases to our clients at scale.

Global Group

Expansion of long-standing strategic partnership with SAP to drive large scale **SAP** transformations and industry-leading Gen AI solutions together with SAP's business AI portfolio, including SAP Business Technology Platform (BTP) based AI services to help solve clients' complex business processes.

Dedicated Global SAP CoE to focus on industry-specific business use cases that will help accelerate clients' Gen AI implementation.

Global Group

Capgemini and **Intel** are expanding partnership to build AI Accelerators based on Intel's Gen AI infrastructure and software offerings.

Focusing on Sovereign AI and IOT, we plan to jointly develop solutions that will bring use cases-based AI Models to the edge and on-prem.

Global Group

Capgemini and **Qualcomm** are working to bring AI anywhere through intelligent connected offerings focused on automotive, IOT, energy & utilities, and public safety.

Utilizing Capgemini industry and engineering expertise to build connected Gen AI solutions that can run locally and in mission critical environments.

Global ER&D

Gen AI partnerships (3/4)

Capgemini and **Anthropic** are exploring a strategic collaboration to enable enterprise Gen AI adoption with AWS and Google.

Focused on creating reliable, interpretable, and steerable AI systems and emphasizes safety and ethical considerations in AI development.

Anthropic available via AWS partnership and Amazon Bedrock.

Global Group

Capgemini and **Cohere** are exploring a partnership around innovative use cases that will help in building AI strategy and scaling up leading-edge & industry use cases.

Cohere specializes in natural language processing (NLP) technologies and provides powerful, easy-to-integrate AI models for various language tasks.

Global Group

Capgemini and **Mistral AI** have a global partnership aimed at helping organizations that are looking to transform through a broad range of AI models.

Leveraging Mistral AI's LLM technology, Capgemini aims to make Gen AI more accessible for enterprises looking to customize and deploy multiple use cases for a large number of users, and with a lower carbon footprint.

Global Group

Capgemini and **Aleph Alpha** are collaborating to help customers through their actionable insights and data driven decision making capabilities using their analytics platform that uses natural languages processing to analyze vast amounts of financial data from various sources.

Local Group

Gen AI partnerships (4/4)

Capgemini and IBM have been working together for more than 20 years, helping businesses harness and use IBM's technology, including watsonx.ai.

Capgemini is among the largest participants in IBM PartnerWorld®, and have achieved IBM Platinum Business Partner status – the highest designation IBM offers.

Global Group

Capgemini and Liquid AI are collaborating to build next-generation AI solutions for enterprises.

The collaboration focuses on advancing AI solutions in various domains, including manufacturing, healthcare, finance. It will also open new applications of advanced AI solutions on the Edge.

Capgemini participated in Liquid AI's seed round.

ER&D Group

Capgemini and Databricks have been collaborating since 2018.

Capgemini leverages Databricks which provides industrialized AI and data engineering tools that enable customers to modernize and deploy workloads 40% faster than traditional approaches, Capgemini will enable RAISE Offer to utilize these capabilities where applicable in H2.
