RISE WITH SAP OVERVIEW

Our RISE with SAP initiative helps businesses accelerate their digital transformation by delivering tailored solutions for cloud adoption, business process optimization, and innovative tools for achieving long-term success.

Through this program, we offer a holistic approach to modernizing IT landscapes while improving operational efficiency, all in collaboration with SAP's cutting-edge capabilities.

The key points for potential benefits of "**RISE with SAP**" :

1. **Accelerated Digital Transformation:** Simplifies the shift to cloud-based, intelligent enterprises.
2. **Cost Efficiency:** Helps reduce total cost of ownership (TCO) by streamlining IT landscapes and business operations.
3. **Business Agility:** Provides flexibility to adapt quickly to market changes and innovate faster.
4. **Scalability:** Supports future growth with scalable cloud infrastructure.
5. **Integrated Tools & Services:** Access to a comprehensive set of services, including AI, analytics, and automation for optimized performance.
6. **Business Resilience:** Strengthens operations with enhanced security and compliance features.

What does being a validated partner means

PREREQUISITES

Requirement Category	Detailed Criteria Description	Accepted Criteria Eligible Value	Remarks
SAP Competency Framework* achievements	Attained RISE with SAP Competency Designation	EXPERT tier	Achieved at group level (PGA grouping applies)
	Attained SAP Business Technology Platform Competency Designation	EXPERT tier	
	Attained Business Process Transformation Competency Designation	EXPERT tier	
Delivered projects performance	Number of project Go-Lives for RISE with SAP with dACV (deployed annual contract value) above 500K EUR (in the past 24 months)	5+	Achieved at group level across multiple geographies (PGA grouping applies)

- Prerequisites need to be maintained
- On top of keeping the relevant certifications live, we also need to carefully track RISE projects and make sure these are mapped into the SAP systems

COMMITMENTS

Partner organizations that accept the invitation by SAP to participate in a RISE with SAP validation process on group level, are committed to adhering to the following guiding principles and criteria at all times:

- Roll out the validated methodology to all customer-facing and project teams in every country (covered under the PGA) and ensure that project managers take the relevant training made available by SAP.
- Execution of the Clean Core Success Plan related Quality Gates as per the SAP Activate Methodology for RISE with SAP S/4HANA Cloud Private Edition in all eligible** RISE with SAP projects.
 - At least 80% of projects must have all Clean Core Quality Gates completed with "Accepted" or "Conditionally Accepted" status, recorded in SAP Cloud ALM
- Continuous update, and completion of all open items of the methodology based on SAP Activate and RISE with SAP Methodology.
 - Based on new releases
 - Based on validation workshop open follow-ups documented as per the validation report (for re-certifications and ongoing validity checks every 6 months)
- Closely collaborating with SAP customer-facing roles involved in the customer engagement lifecycle, from sales to onboarding and implementation.
- Make the best effort to ensure at least 50% of developers working on the RISE with SAP project are certified in SAP Business Technology Platform and at least one certified Project Manager in SAP Activate as per certifications valid for the [Competency Framework](#) – RISE with SAP S/4HANA Cloud Private Edition.

- Methodology rollout in each country and local monitoring of RISE projects for compliance
- Fulfilment of certification requirements in each RISE project (SAP Activate and BTP)

- RISE with SAP Validated Partner Recognition
- Show a proven rollout of their globally validated methodologies to all countries with active affiliates worldwide (covered under the PGA). Every partner local entity committed to training the project teams on RISE with SAP Methodology.
- **Adapting their Statement of Work (SoW)** to include the execution of clean core success plan activities and respective quality gates.
- Partners will present to SAP the necessary evidence from such a **rollout execution every quarter**.
- Participate in SAP Embedded Launch Activities sessions with the customer and is responsible for planning activities in the project plan to execute the clean core success plan and deliver the five (5) clean core quality gates in SAP Cloud ALM.
- Evaluate SAP recommendations as an outcome of each quality gate and agree with the customer on required actions to address any potential deviations on adherence to clean core principles.
- **All Projects** must complete quality gates with “Accepted” or “Conditionally Accepted” status
- Closely collaborating with SAP customer-facing roles - collaborate closely with SAP Onboarding Advisors, Enterprise Architects, Customer Success Managers, and Partner Delivery Managers to monitor and review the execution of the RISE with SAP Methodology.
- Adoption of the SAP integrated toolchain if the customer has the related subscriptions available - Cloud ALM (free), Signavio, Leanix, SAP BTP, and SAP Build, Tricentics.

Expectation from Capgemini Project Team

- EM to share project team details(mail ids, roles) to check certification progress from Global tracker
- Check the Rise certification codes for faster onboarding/hiring
- Advice from SAP is to train project PMO on CALM for better functioning
- Usage of Partner SUserID to create customer cases

Service Partner User Management Application Overview

The service partner user management application allows SAP customers to **authorize partners' own S-user IDs** to create cases on the customer's behalf

SAP recommends that customers / partners leverage the service partner user management application for scenarios where **partners engage with SAP support** at the request and on behalf of customers

NEW FEATURES

- Mass Invitation via excel file upload
- Notification of authorization expiration within application and via email
- Mass authorization – customer can copy authorization from one S-user to other S-users

Step 1. Customer invites partner's own S-user

Manage Service Partner Users
If you are a cloud customer's administrator, you can invite your partner's S-users to report cases on behalf of your company.

Customer cloud admin accesses the **Manage Service Partner Users** access card & invites a partner's existing S-user

Step 2. Partner accepts the customer invitation

Service Partner User Cockpit
1
partners using
Accept invitations to report cases on behalf of you or your customers, while still using your own partner S-user ID.
[Open Cockpit](#)

Partner S-user receives an e-mail notification of the invite and accepts it in the **Service Partner User Cockpit** access card

Step 3. Customer assigns the authorization to partner

Manage Service Partner Users
If you are a cloud customer's administrator, you can invite your partner's S-users to report cases on behalf of your company.

Customer selects user in **Manage Service Partner Users** access card and assigns the authorization validity period and systems

Step 4. Partner creates case on customer's behalf

Get Support (Cases, Expert Chat...)

Partner consultant (S-user) is now able to create / manage cases for customer's systems with own S-user ID

Important Actions for SAP Practice Leads

Ensuring Compliance

- ★ Ensure RISE with SAP projects are tracked in '**SAP for Me**' portal by Market Unit + Practice + RISE SPOCs
- ★ All practice leaders should ensure certifications are met in RISE projects and for the practice
- ★ All COE resources in their region should go for the RISE badge
- ★ Updating EMON and THOR by Sales leads and Delivery Leads

Leverage Growth Opportunities

- Address the urgency created by the **2027** end-of-maintenance deadline for older on-premise solutions
- Provide continuous support for RISE with SAP implementations to secure long-term revenue streams

Delivered Project performance

- ★ **5+** Number of project go-lives for RISE with SAP with deployed annual contract value (dACV) above €500K (in the past 24 months)

Achieve Competency Framework (At Expert Level globally)

- Attained RISE with SAP competency designation – *Degreed Courses*
- Attained SAP Business Technology Platform competency designation – *SAP Certification*
- Attained Business Process Transformation competency designation – *SAP Certifications*

Achieve Certification Targets

- ★ **RISE with SAP Projects** – 100% of RISE project practitioners must hold role-specific certifications by July 2025
- ★ **Overall SAP Practice** – 50% of overall SAP practitioners need at least one valid certification by end of 2025
- ★ Certifications obtained before April 2024 expire by March 31, 2025 – renew or replace them timely

Roles of RISE Local SPOC's

Self Enablement

- Keep your certification status up to date, update your RISE with SAP methodology knowledge, understand the latest RISE mandates, certification criteria

Delivery Enablement

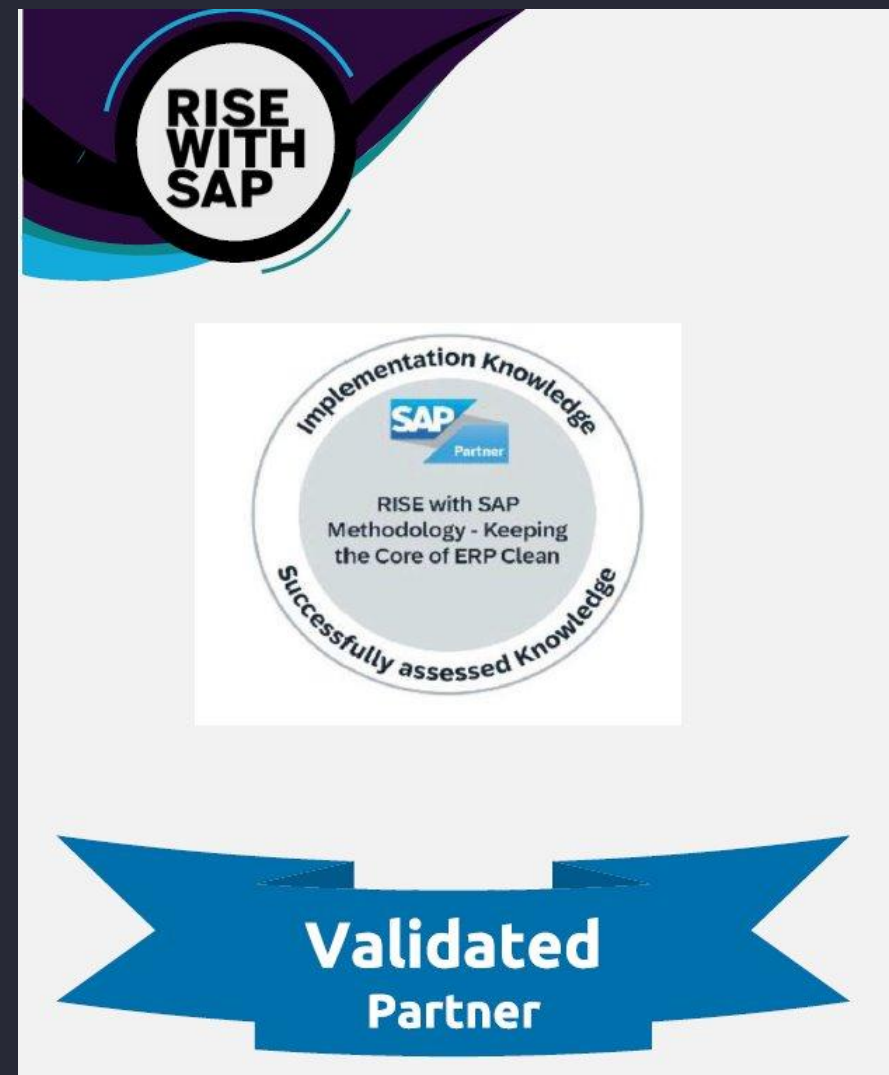

- Conduct briefing session on RISE with SAP methodology, Clean Core success plan, Quality gates assessments
- Guide the RISE project team on Next steps

Implementation Oversight

- Oversee RISE with SAP implementations and adherence to clean core principles
- Promote integrated tools like SAP Signavio, LeanIX, and SAP BTP for delivery quality

Performance Tracking

- Monitor certification progress across roles within region
- Address gaps in practitioner certification to meet compliance targets
- Maintain the tracker and report about RISE projects prerequisites status to the Global RISE Governance Team
- Provide feedbacks to the global team for communication to SAP on improvements required/escalations

EMs (Engagement Managers)

- ✓ Project teams are trained on the RISE with SAP Methodology. - Degreed courses -100%
- ✓ Collaborate closely with SAP Onboarding Advisors, Enterprise Architects, client Success Managers, and Partner Delivery Managers
- ✓ Monitor and review the execution of the RISE with SAP Methodology
- ✓ Project tracked in 'SAP for ME' portal
- ✓ Ensure continuous learning and certification for all relevant roles by July 2025

DLs (Delivery Leads)

- ✓ Participate in SAP-Embedded Launch Activities sessions with the client
- ✓ Planning and execution of clean core success plan and deliver the five clean core quality gates
- ✓ Maintain a clean core success plan, execute Quality gates assessments in SAP Cloud ALM
- ✓ Evaluate SAP recommendations from quality gates and agree with the client on required actions
- ✓ Ensure EMON and THOR is updated, and all project team member details including contacts and roles are also up to date in SAP Cloud ALM

Delivery Team

- ✓ Complete all clean core quality gates with "Accepted" or "Conditionally Accepted" status in SAP Cloud ALM
- ✓ Adopt SAP integrated toolchain solutions like SAP Cloud ALM, SAP LeanIX, SAP Signavio, SAP Business Technology Platform, and SAP Build
- ✓ Maintain continuous learning and achieve relevant SAP certifications for RISE
- ✓ Ensure to complete RISE with SAP Methodology training
- ✓ Handle client consulting inquiries and involve SAP for actual support cases

RISE WITH SAP S/4HANA CLOUD PRIVATE EDITION

**CUSTOMER ON-BOARDING
FOR SAP S/4HANA CLOUD
PRIVATE EDITION**

Customer On-Boarding

OBJECTIVE

1. **Simplify the experience for the customer**
2. **Access to the Customer Onboarding Centre**
3. **Key Touch points for the Onboarding Journey**
 - Welcome & Introduction
 - Helps understand the onboarding journey
 - Helps comprehend the value proposition of the SAP solution and entitlements
 - Understand the Users and Authorizations.
 - Project Readiness
 - Talks about the Tools, Methodology, Best Practices useful for implementation
 - Overview of the Activate Methodology
 - Project Guidance
 - Evaluate Project Status
 - Fit to Standard Guide
 - Project Progress
 - Measure Project Progress & milestones
 - Understand Cutover concept
 - Go – Live Preparation
 - Final Go Live Activities
 - Identify the Post Go-Live support resources

PROCESS

1. **Discovery & Planning:** Understanding customer's requirements, defining the project scope, and preparing a roadmap.
2. **System Setup & Configuration:** Cloud infrastructure setup, initial system -configuration, and any customization required.
3. **Testing & Validation:** UAT (User Acceptance Testing), system validation, and performance testing.
4. **Data Migration:** Overview of the data migration process, including preparation, validation, and execution.
5. **Go-Live Preparation:** Final checks, go-live plan, and transition support.
6. **Hypercare & Support:** Post-go-live support and optimization.

Key Success Factors for a Smooth Transition

1. **Collaboration and Communication:** Emphasize the importance of ongoing collaboration between the customer's team and SAP/implementation partners throughout the project.
2. **Change Management:** Address the need for proper change management strategies to ensure user adoption, training, and minimal disruption to the business.
3. **Data Integrity:** Focus on ensuring data quality and accuracy during migration to avoid any issues during and after go-live.
4. **Agile and Scalable Approach:** Demonstrate how the project is handled in an agile manner, ensuring flexibility to adapt to changes while being scalable for future growth.

APPLYING RISE WITH SAP METHODOLOGY IN CAPGEMINI INDUSTRIALIZATION

The RISE with SAP Methodology – SAP Activate

- The RISE with SAP Methodology represents a comprehensive framework designed to drive digital transformation and intelligent operations within organizations. It leverages advanced tools and strategies to streamline processes, enhance efficiency, and accelerate innovation.
- Integration with SAP Cloud ALM as the underlying digital system.
- The framework consists of three pillars; SAP Best Practices, Guided Configurations, and the SAP Activate Methodology that collectively minimize risks associated with such transitions.
- The RISE with SAP Methodology brings together an enriched SAP Activate, a new onboarding offering, and enhancements to SAP Cloud ALM, via the components below
 - Onboarding
 - Clean Core Success Plan
 - Quality-Gate Process Execution
 - Reporting & Follow-On Activities

Capgemini Delivery Methodology Alignment With SAP Activate and RISE Program

- Capgemini's industrialization methodology has been powered by SAP's latest Activate methodology which covers both approaches – Agile & Waterfall.
- It is aligned with RISE with SAP following clear core concepts and SAP Activate Best Practices.
- This Agile/Lean approach enables our clients to use Capgemini Method and Tools ability to realize benefits of both packaged SAP and tailored SAP approaches.
- Here are some of the key comparison between SAP Activate and Capgemini Global Methodology

	SAP Activate	Capgemini Global Methodology
Methodology	The framework consists of three pillars; SAP Best Practices, Guided Configurations, and the SAP Activate Methodology that collectively minimize risks associated with such transitions.	Capgemini Global method supported by DAN /Solution Navigator consist of exhaustive list of phase wise guidance templates, artifacts and tools which are aligned with SAP Activate method adopted for SAP RISE program
S/4 HANA Compliance		S/4 HANA based SAP Best Practices for both SAP Activate and Capgemini Methods. Additionally, Capgemini methodology is supported by Preconfigured PATH solutions
Business Process Orientation	SAP Activate is IT-centric Methodology	Capgemini Global methodology is Business-centric Methodology based on Lean and Six Sigma

Capgemini Delivery Methodology Alignment With **SAP Activate and RISE Program** (Contd...)

	SAP Activate	Capgemini Global Methodology
Scope/Process Hierarchy	SAP Activate scope items are scenario based recommending Fit/ Gap leading to more customization	Capgemini methodology supported by DAN/DDF having more flexibility using L3 business processes as building block
Content:	SAP Activate utilized SAP S/4HANA Best practices based on SAP Scope item and feeds them into SAP Cloud ALM as the underlying digital system.	Capgemini DAN/ Solution Navigator refer and baseline various templates from core value streams, path solutions, country localizations build over and above SAP s/4HANA Best Practices along with SAP Agile and cloud components integrated in Capgemini Methodology
Configuration Approach	SAP Activate has Guided Configuration available for Cloud edition and Classical IMG approach for on premise edition.	Capgemini Business modeling tool i.e Capgemini Digital Delivery Framework includes guided configuration at more granular level (L3) for on premise edition based on Capgemini BPML.

CAPGEMINI ACCELERATORS ALIGNED WITH SAP RISE

Digital Acceleration Navigator (DAN)

DAN is Capgemini's cloud platform to accelerate business-led digital transformation programs by enabling - digital tools - the execution of our methodology.

DAN is made of 4 components:

STRATEGY NAVIGATOR

Digitizes approach to strategy with online repositories of questionnaires, trees of value drivers and KPIs, facilitates building the business case and the roadmap with features to compare scenarios, report and showcase granularity.

CHANGE ADOPTION PLATFORM

Digitizes change approach, from the business strategy all the way through to understanding the business change impact on different personas and the actions required to start working in the new way. Enables leaders to proactively manage readiness in their areas.

SOLUTION NAVIGATOR

Leverage the full potential of Capgemini methodology and guidance or industrialized delivery with relevant **accelerators and tools**.

VALUE NAVIGATOR

Track value at each release/iteration and monitor operational and strategic KPIs against baseline and business case targets.

DAN / Solution Navigator

It provides **methodology artifacts, Best Practices pre-built content and tools to Build Solutions** following SAP RISE clean core concepts and in alignment with SAP S/4HANA Activate method.

It provide phase wise guidance to all project stakeholders, supporting them in executing and tracking activities relevant for different persona's in each phase of project execution. All Tools and Build templates (development/data) are built following SAP RISE clean core principles.

Also, **SAP RISE Quality gates reference document links have been incorporated in relevant Capgemini Methodology phases for projects** to track and make sure they are RISE compliant

Digital Delivery Framework Tool (DDF)

DDF tool is a **Capgemini proprietary application** on a **centralized, secure database**, which provides standard SAP business processes along with pre-populated content.

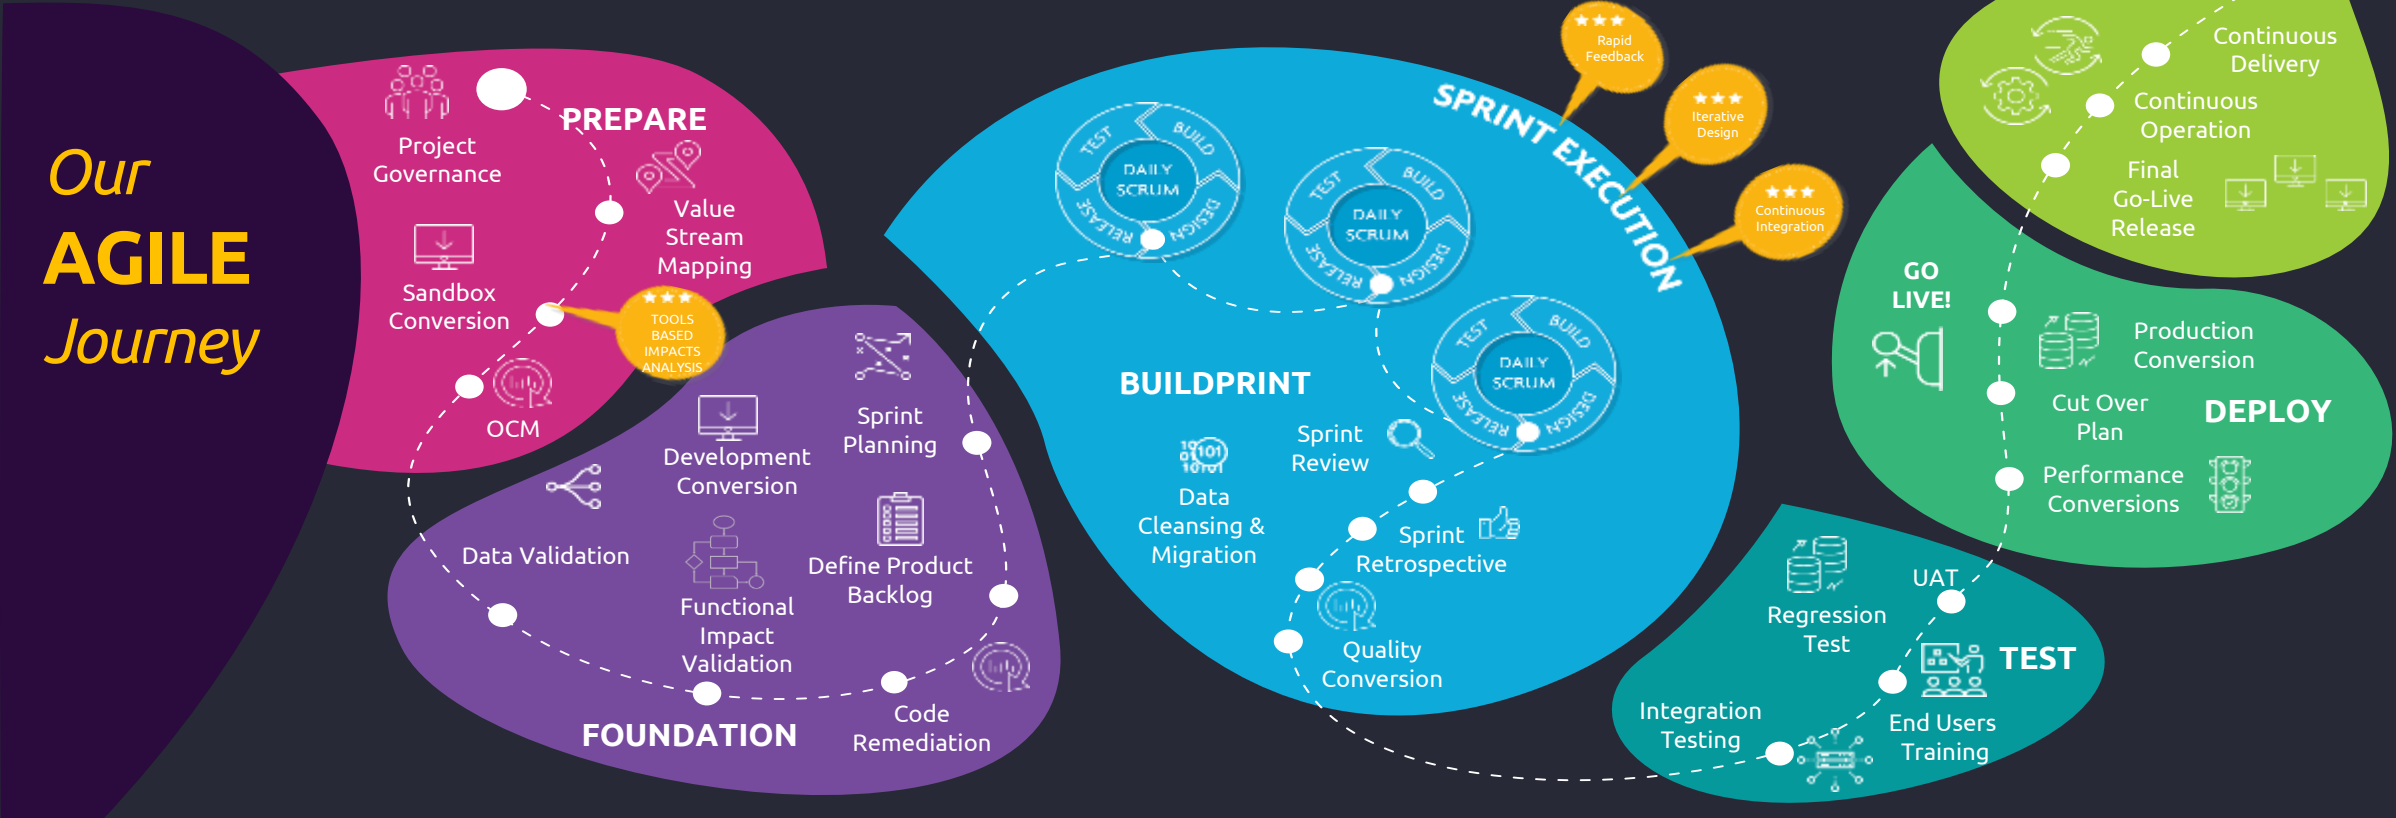

It consist of Best practices content build by referring SAP S/4HANA Activate processes, which are enhanced further by Capgemini delivery experience.

Benefits of Digital Delivery Framework Tool

- **Integration & alignment** : Alignment with Solution Manager, Core Value Streams , S4HANA , Agile and Cloud Components
- **Simplification** : Automatic creation of several deliverable documents (Business Process FDD, Configuration documents, Unit Test Scripts) leading to reduction of manual documentation and non value added work
- **Dashboard Management** : Executive & Business Process Dashboards alongwith Data and Development Dashboard Management in a central location for better tracking and visibility

S/4HANA Tool Chain Aligned With SAP Rise Clean Core Leveraged Across Phases of Capgemini Delivery Method

ONE SIMPLE, LEAN and AGILE Methodology | **FASTER RELEASE** | **COST EFFECTIVE** | **REDUCED RISK**

* Assessment Output from C-FAT, C-CAT, iSCAN, C-CMAT, C-FDRT & C-PTAT Tools will be input to Preparation Phase

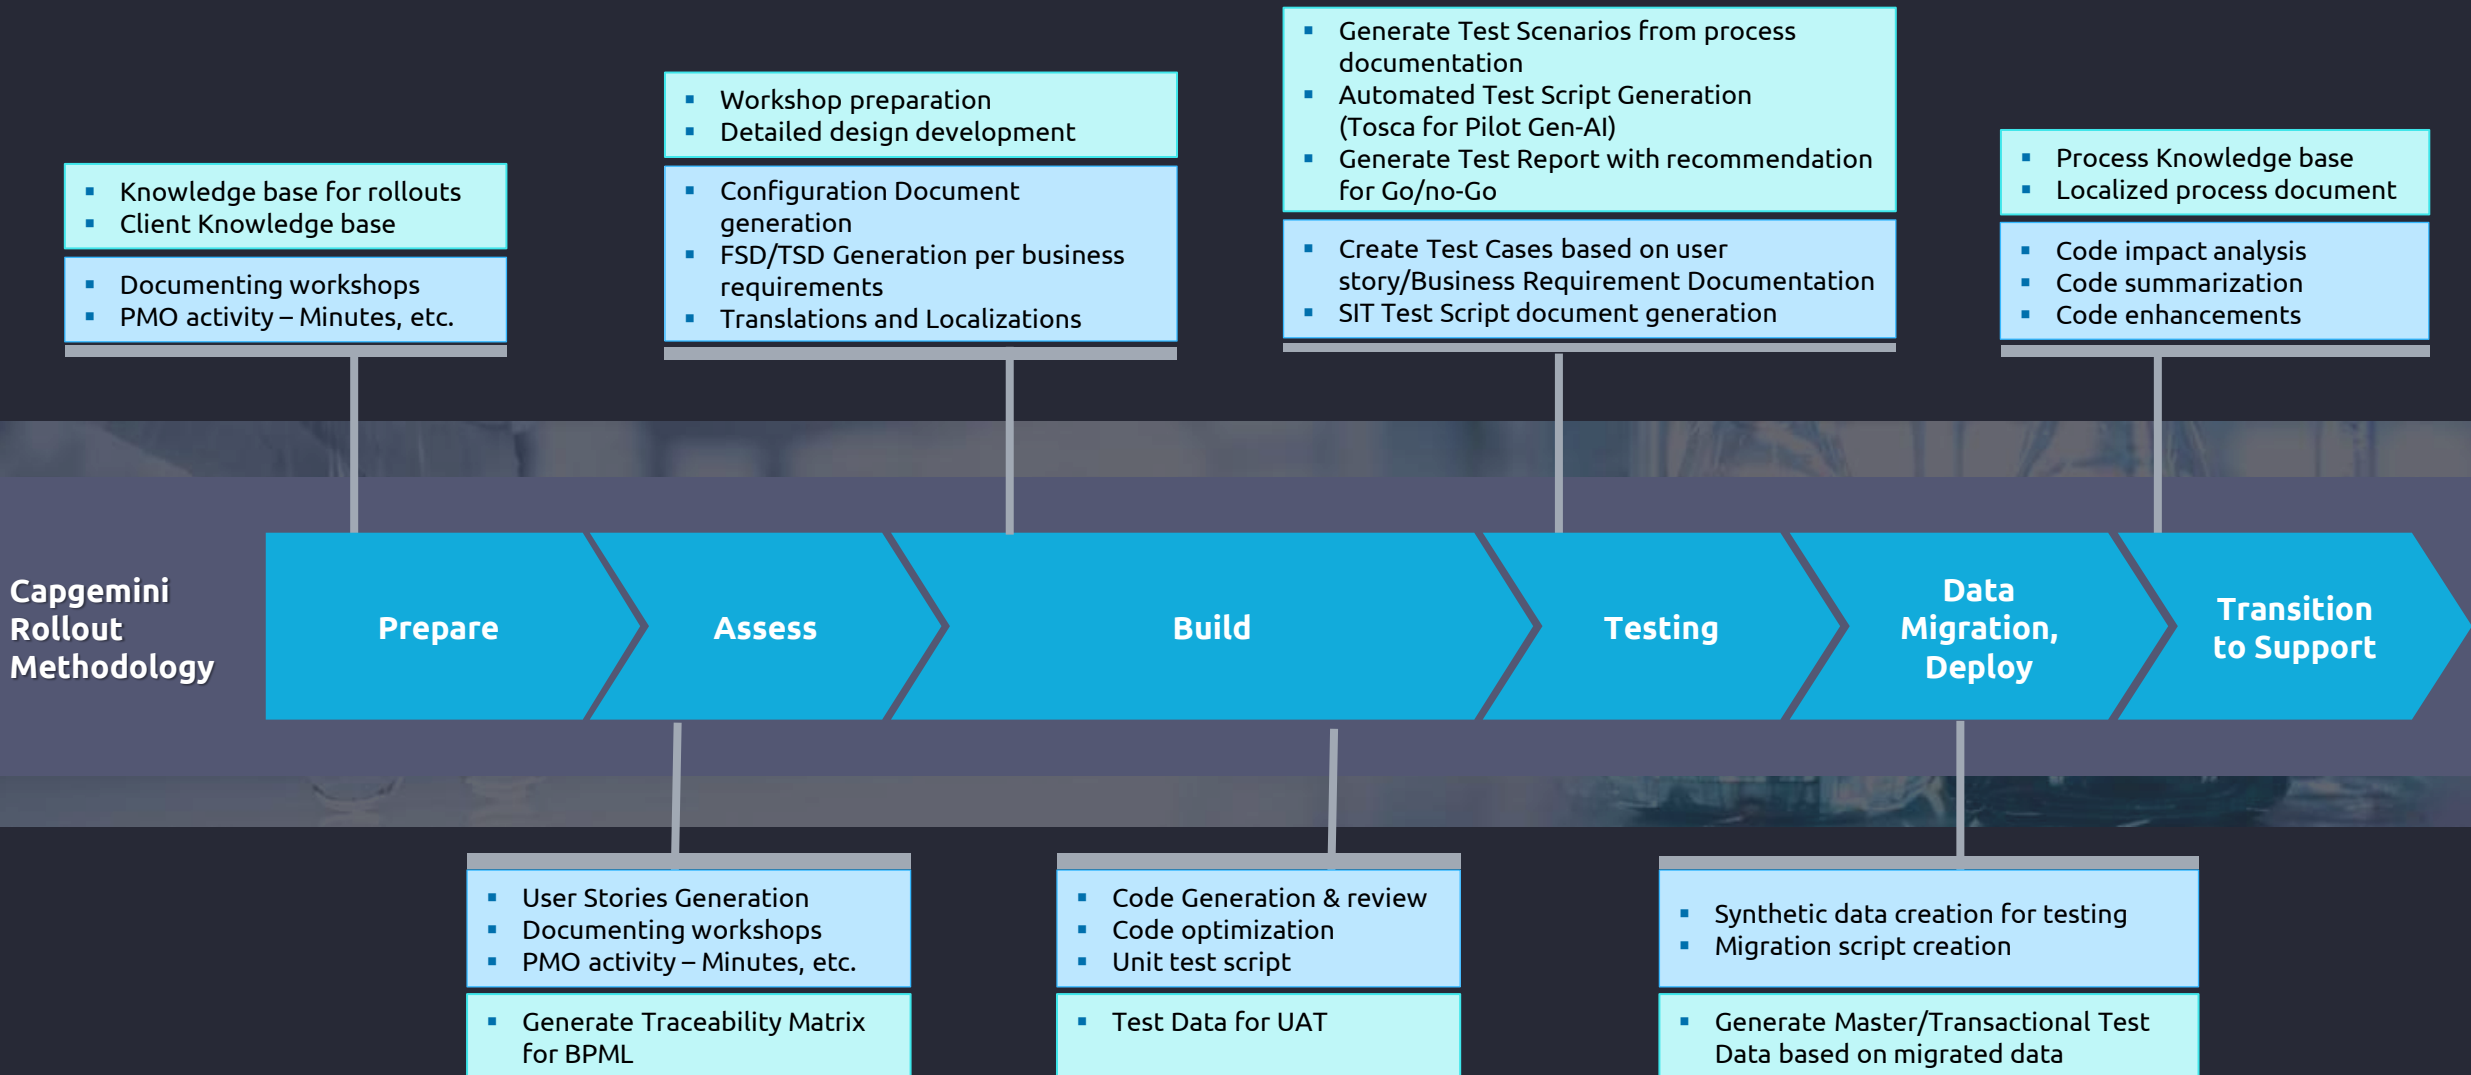

Prepare			Foundation				BuildPrint				Test		Deploy		Operate
iSCAN	C-CMAT	DDF	C-MDRT	C-ART			C-ART	C-MDRT	C-CVRT	DDF	CFDRT	C-CVRT		C-MDRT	DDF
C-CAT	C-CPT		C-PTAT	C-PRT			C-FCT	C-SART			C-FCT			C-PTAT	
C-FAT			C-SART	C-FCT	DDF		C-PRT	C-PTAT	C-MADA		CPTAT				

Tools Chain Leveraged

Leverage Gen-AI for Delivery: Use Cases on Each Program Phase

On each program phase, **repetitive** and **time-consuming tasks** and deliverables are improved, injecting Gen-AI capabilities. We are **continually improving** the Capgemini Augmented Delivery Framework, based on the maturity of the technology.

Include Gen AI and AI in Your Solution

- User experience
- Finance
 - **Touchless AP**
 - ML for Cash Application
 - Intercompany matching & reconciliation
- Accruals management
- Supply chain
- Order management
- Operations
- Project management

>50%	Invoice processing cost savings
~95%	Reduction in data entry
>15%	Decrease in TCO

- Document Generation
- SAP Development –WRICEFs
- Code remidiations
- Code impact analysis

15–40%	Improvement in development activities
--------	---------------------------------------

AI In Business Processes

Gen AI Based Business Process

Gen AI for SAP transformations

Workforce of the Future

- User Actions – E.g. Create PO SO
- Interrogation usecases – e.g. Adhoc reporting
- Interaction usecases – Eliminating Paper, Messages etc

~15–20%	Reduction in sales & operational planning process.
---------	--

- Building the future of workforce
 - Training business thru GEN AI
 - Enabling clients to adopt and onboard Gen AI

~10	Member Gen AI pool created for German lifesciences client
-----	---

<https://prism.capgemini.com/page/1134291> - **GenAI Prism page**

[Business AI & Gen AI](#) for Capgemini Development Cockpit and other assets.

SAP RISE TOOL INTEGRATED IN CAPGEMINI GLOBAL METHODS

- SAP Signavio accelerates transformation initiatives and maximizes SAP S/4HANA Cloud's potential.
- Enables detailed impact analysis and optional improvement strategies.
- Integrated into Capgemini Global Methodology (DAN/Solution Navigator) as a Process Designing and Process Mining tool.
- Enhances understanding and optimization of business processes.
- Bridges the gap between business and IT, simplifying the value journey from SAP S/4HANA Cloud.
- Fosters business agility and operational success.

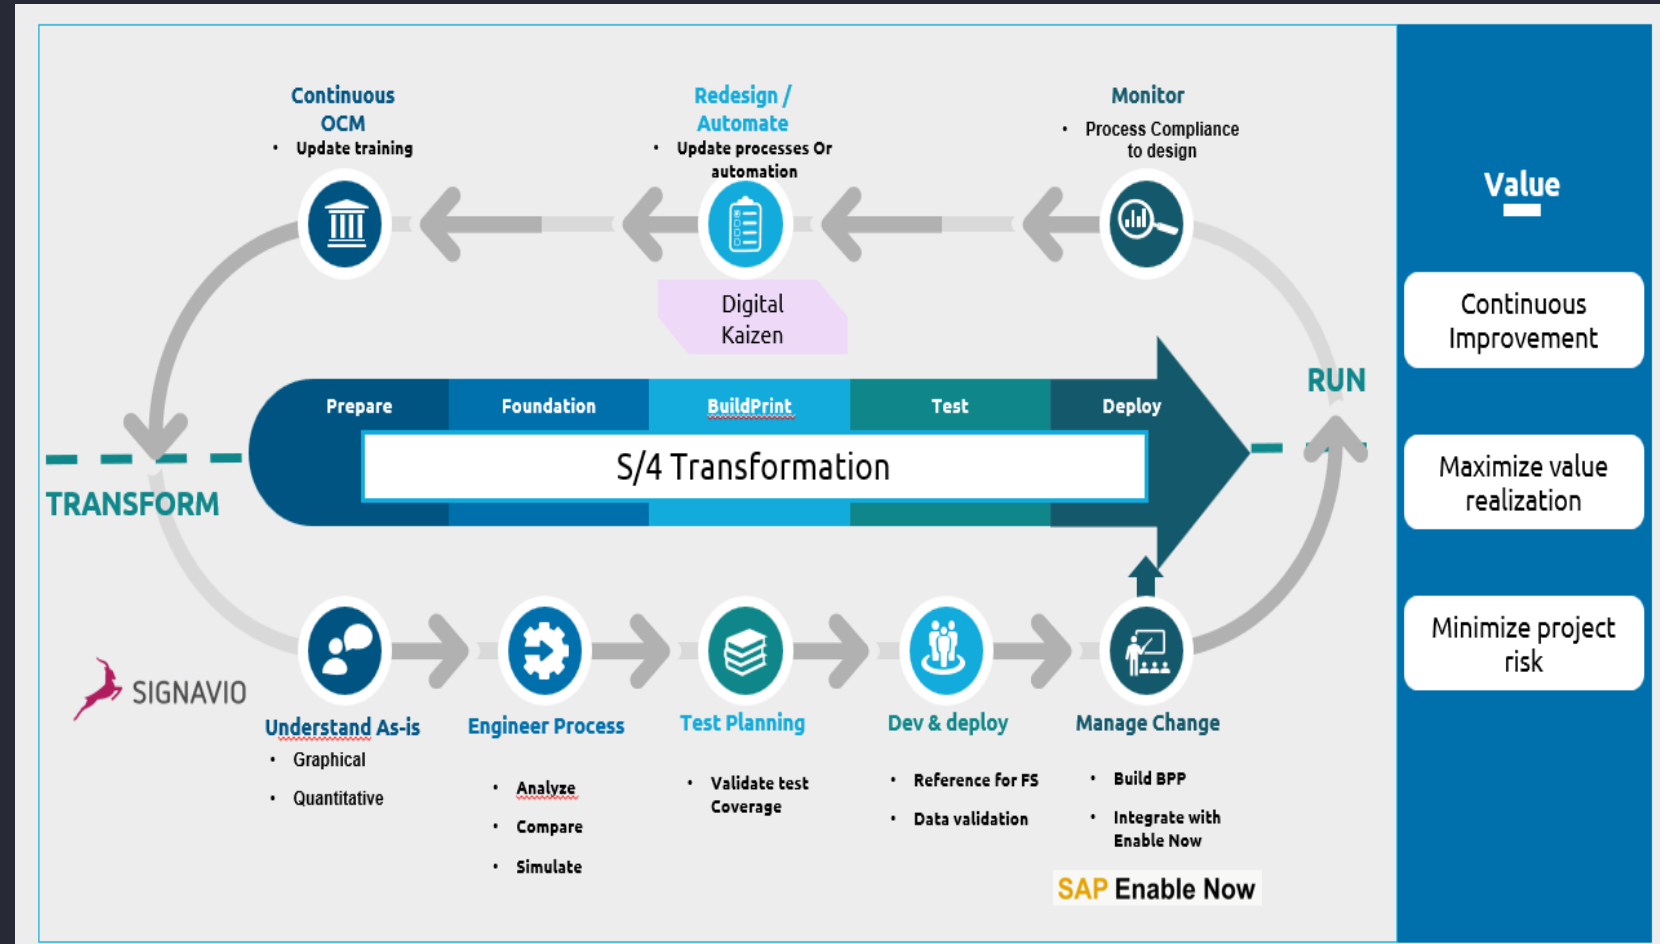

Capgemini Global Methodology now integrated with Signavio Platform consist of prebuild repository of Capgemini Best practices BPML process hierarchy in Signavio BPMN 2.0 Format. It provides the benefits of business modelling through Capgemini Leading Practices during the business transformations.

Capgemini customers can leverage the Signavio platform and Capgemini Leading practice business processes to re-imagine and simulate their organizational operations.

This pre-build repository is currently available for different industry sectors like Manufacturing, Grocery and Consumer Path. These business process hierarchies can be easily exported from Capgemini Signavio instance or Methodology SharePoint and imported into customer Signavio instance for business modeling workshops.

Leveraging Signavio in every phase of enterprise transformations

Capgemini has developed a tailored methodology within the Signavio Suite that is designed to drive continuous process optimization and value delivery. By leveraging Signavio's powerful process mining and analysis tools, Capgemini helps businesses identify inefficiencies and optimize workflows at every stage of their transformation journey. This unique methodology ensures that organizations can achieve sustained process improvements and long-term value realization through continuous monitoring, feedback, and optimization cycles

SAP Cloud ALM (CALM) supporting Clean Core – Overview

SAP Cloud ALM provides the environment to manage clean core projects along SAP Activate and the 5 dimensions 1 together with analytics and Traceability dashboards to track adherence to clean core criteria

Processes	Extensibility	Data	Integration	Operations
▪ Consumption of SAP Best Practice Content ▪ Execute Fit-to-standard Workshops ▪ Requirements management ▪ Design custom processes ▪ Business Process Monitoring ▪ Job and Automation Monitoring ▪ SAP Readiness Check to remediate simplification items	▪ Manage development (ABAP & BTP) ▪ Manual & Automated testing (with Tricentis Test Automation) ▪ Agile Build ▪ Drive business continuity of extensions built in ABAP and/or BTP ▪ SAP Readiness Check to remediate custom code	▪ Holistic and secure application and business process operations ▪ Integration in IT-SM processes ▪ Automated regression testing ▪ Release Management ▪ SAP Readiness Check for SAP S/4HANA upgrades	▪ Integration Documentation ▪ Manage CPI deployments ▪ Integration and exception monitoring	▪ Integration and exception monitoring ▪ SAP Readiness Check to resolve data quality issues

Note – ALM team will be performing the CALM setup aligned to customer requirement and post having detailed trainings session aligned to S4HANA Project and Customer requirements for BASIS/SAP Functional Team etc. as per respective roles.

This is a SaaS application that enables customers to manage and optimize enterprise architecture. Enterprise architecture management involves aligning an organization's IT infrastructure and systems with its business strategy and objectives. It provides a simplified, 360° overview of all applications, business capabilities, and IT components, so customers can gain control of their expanding IT landscape and create roadmaps for major transformation initiatives.

Cost reduction	• Reduced costs of manual data management • Identify cost-saving opportunities and optimize IT investments
Efficient data management and collaboration	• Efficient data management and collaboration across business operations and IT • Align IT strategies with business goals
Optimal IT infrastructure implementation	• Analyse business processes to verify optimal IT infrastructure implementation (applications, processes, and IT components)
Enhanced Transparency	• Greater transparency when decommissioning processes and systems to minimize errors
Standardized process modelling and architectural design	• Standardize modelling of processes in SAP Signavio through the automated import of applications and other objects from SAP LeanIX • Design the ideal architecture that customers want to create

CLEAN CORE

Analyzing Clean Core Components

By "Core" we are referring to several "dimensions" (or "pillars" if you prefer), each one of which represents a different way that a customer can think about and analyze their ERP system. Those dimensions (in no particular order) are as follows:

- **Processes**
- **Data**
- **Extensions**
- **Integrations**
- **Operations**

**Clean Core Quality
Gates are
mandatory**

By "Clean" we mean that for each dimension listed above, a set of best practices, methodologies, and tools exist. If these are used, they allow the customer to consider that dimension to be "clean". These best practices, methodologies, and tools are specific for each dimension.

Taking into consideration identifying features of clean core we can conceptualize them in five easy to remember bullet points:

Analyzing Clean Core Components (Contd.)

- **Minimalism:** The clean core promotes simplicity by identifying and eliminating redundant or obsolete functionalities, ensuring only essential components remain.
- **Modularity:** It facilitates dividing a complex ERP system into modular components that are loosely coupled, enabling easier maintenance and adaptability.
- **Scalability:** A clean core architecture allows the ERP system to accommodate growth and change without sacrificing performance or stability.
- **Maintainability:** By removing unnecessary complexities, it streamlines the codebase, making it easier for developers to understand, modify, or enhance the ERP system.
- **Stability and Reliability:** A clean core fosters stability by reducing dependencies and making it less prone to bugs and inconsistencies and improving the system's reliability.

The first step in solving a challenge is admitting that there is a challenge to begin with. So, it is with clean core. In preparing for a clean core implementation the specific things to be considered fall under two areas:

- **Conducting a Comprehensive Assessment of Business Processes**
- **Establishing a Strong Governance Framework**

Once preparations for a clean core have concluded and the project implementation has commenced in earnest, the project leaders must remain aware of the goals and follow following clean core principles.

- Streamlining Business Processes
- Rationalizing Data Structures
- Simplifying in Both Brownfield And Greenfield Scenarios
- Adopting Capgemini Global Methodology or SAP's Activate .
- Aligning with SAP's Reference Architecture.
- Applying SAP's and SI clean core Tools and Technologies.
- Change Management and User Adoption
- Continuous Improvement and Innovation

BUSINESS PROCESSES ARE AN IMPORTANT FACTOR TO CONSIDER

Capgemini DAN/ Solution Navigator refer and baseline various templates for core Business processes Best practices solution, path solutions, country localizations which are built over and above SAP S/4HANA Best Practices.

These best practices are built baselining SAP S/4HANA Scope items i.e., BP for different LOB's available in SAP Activate Methodology and are enhanced further based on Capgemini Project Delivery experiences.

CLEAN CORE COMPLIANCE - PROCESS HIERARCHY AND OPTIMIZATION

Prioritized Business Process Hierarchy:

- Identify and categorize core business processes by strategic importance, regulatory requirements, and impact.
- Focus efforts on optimizing critical business processes.

Segmenting Business Process Views:

- End-to-End views: Overall understanding of data flow through the organization.
- Functional views: Focus on specific tasks within business functions.
- Helps teams identify opportunities for process improvement and optimization.

SAP Signavio Solutions:

- Process Insights & Intelligence: Understand processes, identify root causes of issues, and increase transparency.
- Supports process optimization, automation, and standardization.

ESTABLISHING CLEAN CORE COMPLIANCE – ORGANIZATIONAL AND TECHNICAL FOUNDATIONS

Strong Organizational Structure:

- Define clear roles and responsibilities.
- Ensure accountability at each step from business analysts to developers and testers.
- Set up a Process Transformation Office or similar body to drive process transformation success.

Robust Technical Foundation:

- Choose appropriate tools and technologies.
- Ensure scalability, security, and reliability in infrastructure.
- Leverage SAP S/4HANA Cloud, SAP BTP, LeanIX, and other tools to build a solid foundation.

Transformation Methodology:

- Follow a structured process for evaluating, implementing, and optimizing business processes.
- Use methodologies like agile and competitive.

MINIMIZING EXTENSIONS AND ENSURING CLEAN GOVERNANCE

Avoid Unnecessary Extensions:

- Prioritize using standard ERP functionality before creating custom extensions.
- Minimize extensions to reduce system complexity and maintenance overhead.

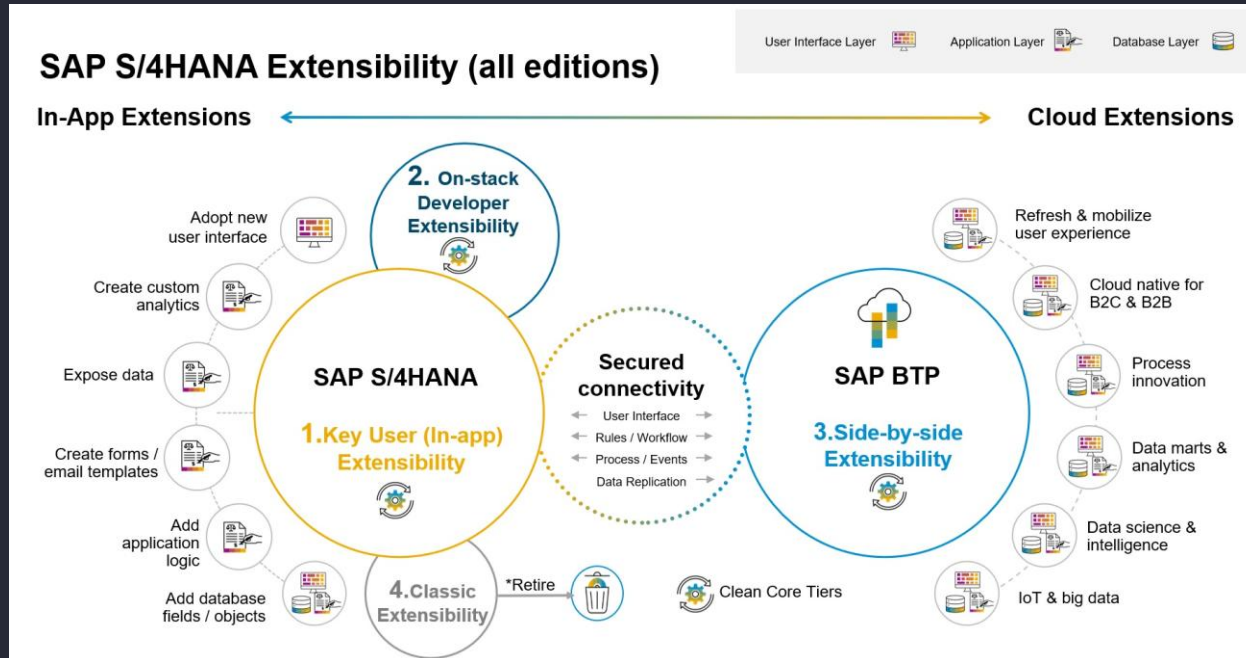

Governance for Extensions:

- Implement a clear governance structure to evaluate the necessity of extensions.
- Document the rationale and value of each extension thoroughly.
- Maintain clean core compliance by adhering to SAP S/4HANA Cloud out-of-the-box functionality when possible.

CLEAN CORE – Development / Extensions

Guiding principles for Clean Core Development/Extensions

- **Extensions Must Be Avoided When Possible.**
- **Extensions Don't Break Upgrades, and Upgrades Don't Break Extensions:**
 1. Extensions can only be implemented internally within SAP S/4HANA Cloud as on-stack extensions or externally as side-by-side extensions running on the SAP Business Technology Platform.
 2. Extensions can only use released local or remote public SAP Application Programming Interfaces (APIs), BADIs, and ABAP RESTful Application Programming Model Business Object (BO) extension points.
 3. Extensions can only be implemented using cloud-enabled and released technologies
- **Extensions Must Be Cloud Compliant**
- **Precisely Understand the Requirement Before Extending**

Extensibility Model:

1. Key User Extensibility (In-App Extensibility)
2. Side by Side Extensibility (Steampunk)
3. Developer Extensibility (Embedded Steampunk)

Please refer to below Capgemini Methodology Document for Clean Core guidance on Development / Extension Strategy :

Capgemini Clean Core Development Strategy Guidelines

Clean Core Approach for Integrations:

How to make landscapes & integrations Clean Core Compliant

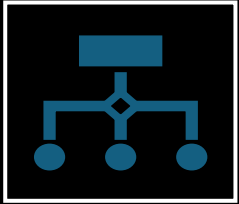

Objective: Ensure reliable and flexible SAP S/4HANA Cloud integrations in a Clean Core-compliant way.

STANDARD APIs 	SAP INTEGRATION SUITE 	SAP EVENT MESH 	SAP APPLICATION INTERFACE FRAMEWORK 	AVOID LEGACY APIs 	CAPGEMINI'S METHODOLOGY 
OData APIs. SOAP APIs. SAP Business Accelerator Hub for API exploration.	BTP service Routing, mapping, and connectivity for smooth integration.	Event-based communication. Supports asynchronous designs and event-driven processes.	Centralized monitoring Error handling by business users.	Minimize the use of RFC and IDoc. Favor modern APIs for flexibility and reliability.	Integration use case patterns. Architecture blueprints. Best practices for cloud and hybrid landscapes.

How to Make Data Clean Core Compliant

Objective: Control data to the latest Clean Core standards and keep the data clean.

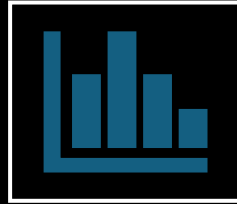

Types of Data

Configuration Data: Defines organizational structure (e.g., company codes, plants).

Master Data: Consistent identifiers for core entities (e.g., customers, vendors).

Transactional Data: Derived from transactions (e.g., sales orders).

Data Quality Principles

Accuracy: Reflects business reality.

Completeness: Ensures all necessary data is captured.

Consistency: Maintains uniform data standards.

Timeliness: Keeps data up-to-date.

Validity: Conforms to standards and business rules.

Uniqueness: Eliminates duplicate data.

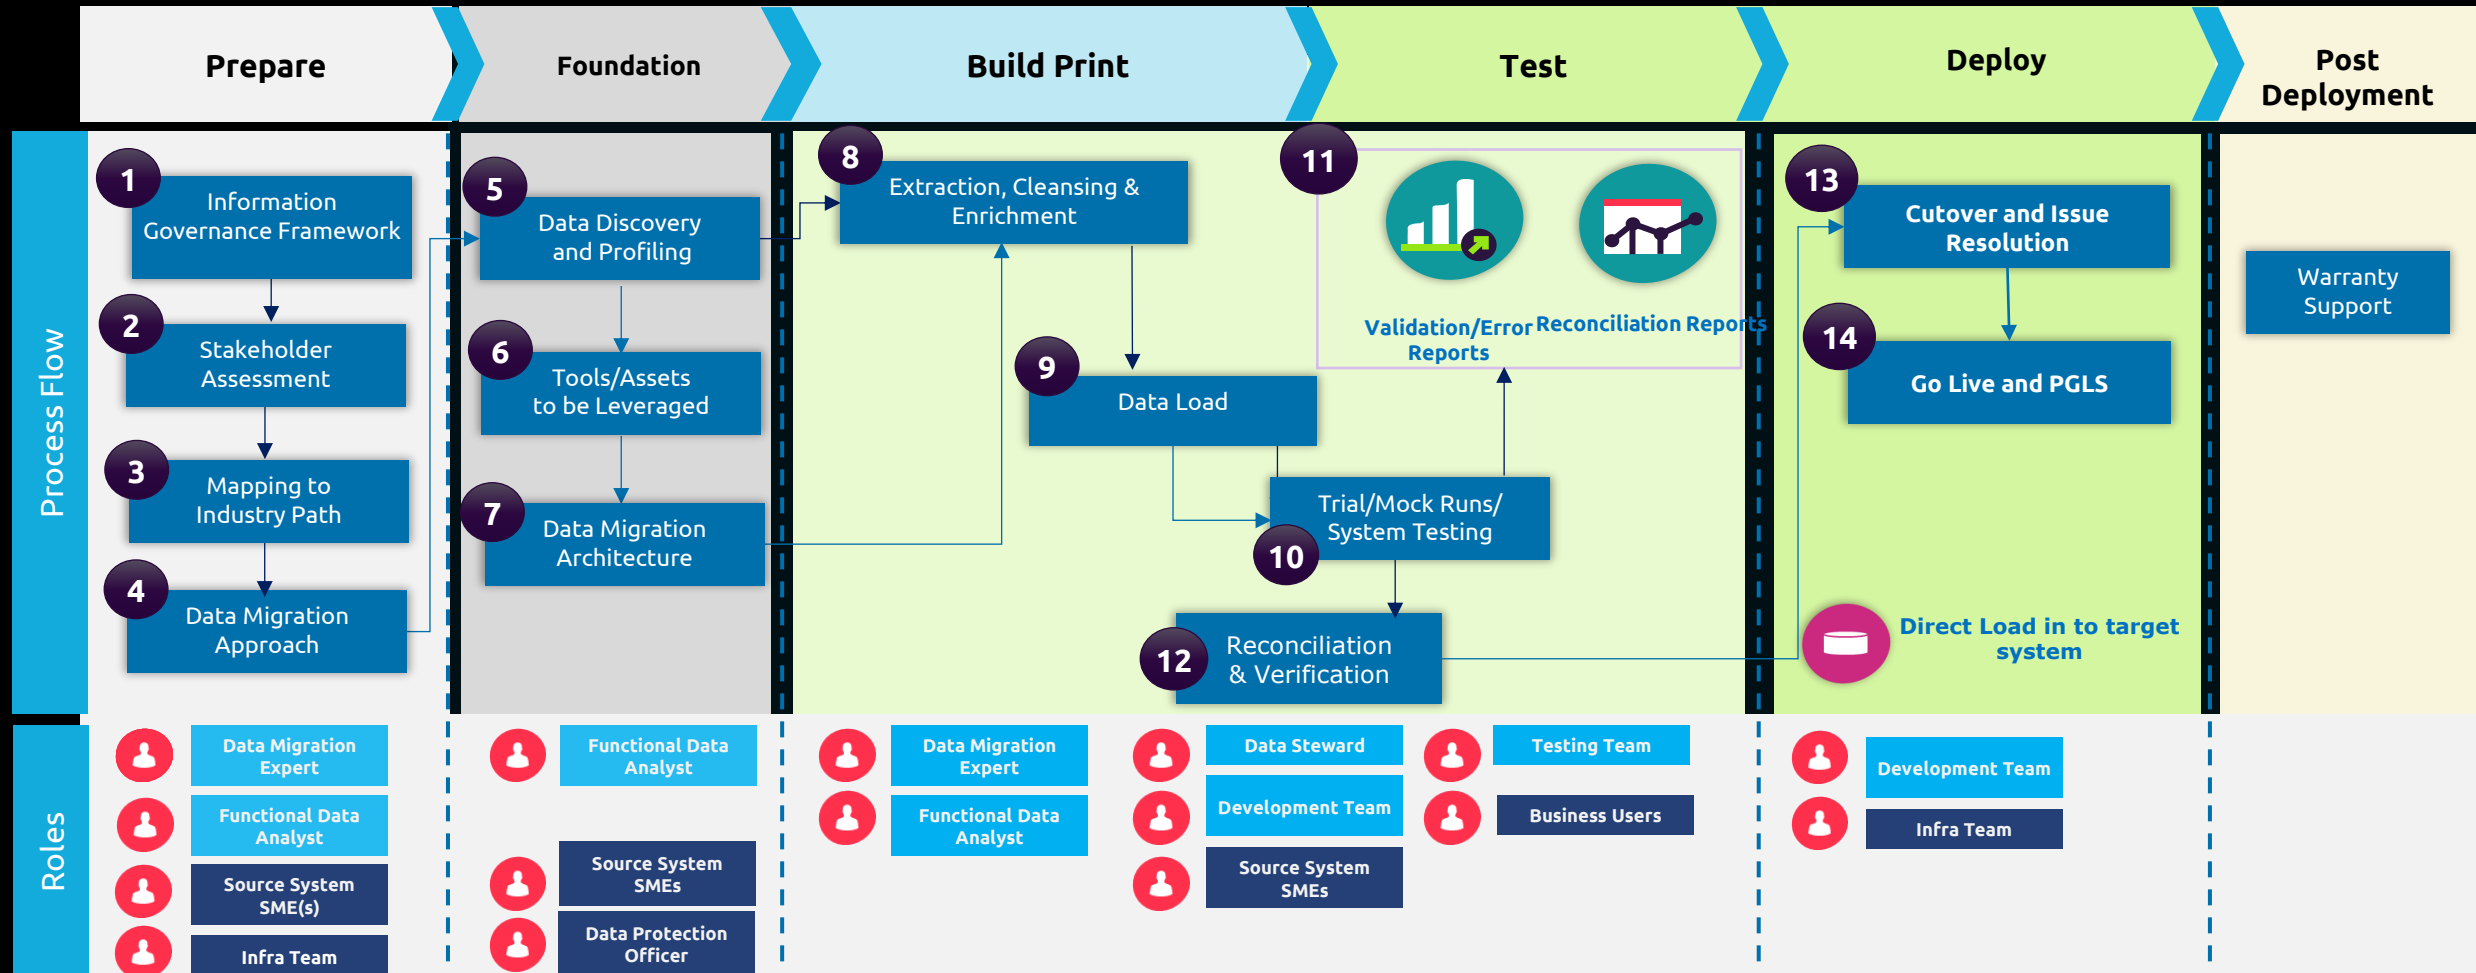

Tools for Data Quality

SAP Master Data Governance: Central hub for managing and validating master data.

SAP Information Steward: Analyzes data impact on business processes.

SAP Datasphere: Comprehensive data integration and management solution.

Data migration methodology - How to Make Data Core Compliant

- Control Data According to Latest Standards
- Maintain Data Quality, Accuracy, Completeness, Consistency, Timeliness, Validity and Uniqueness

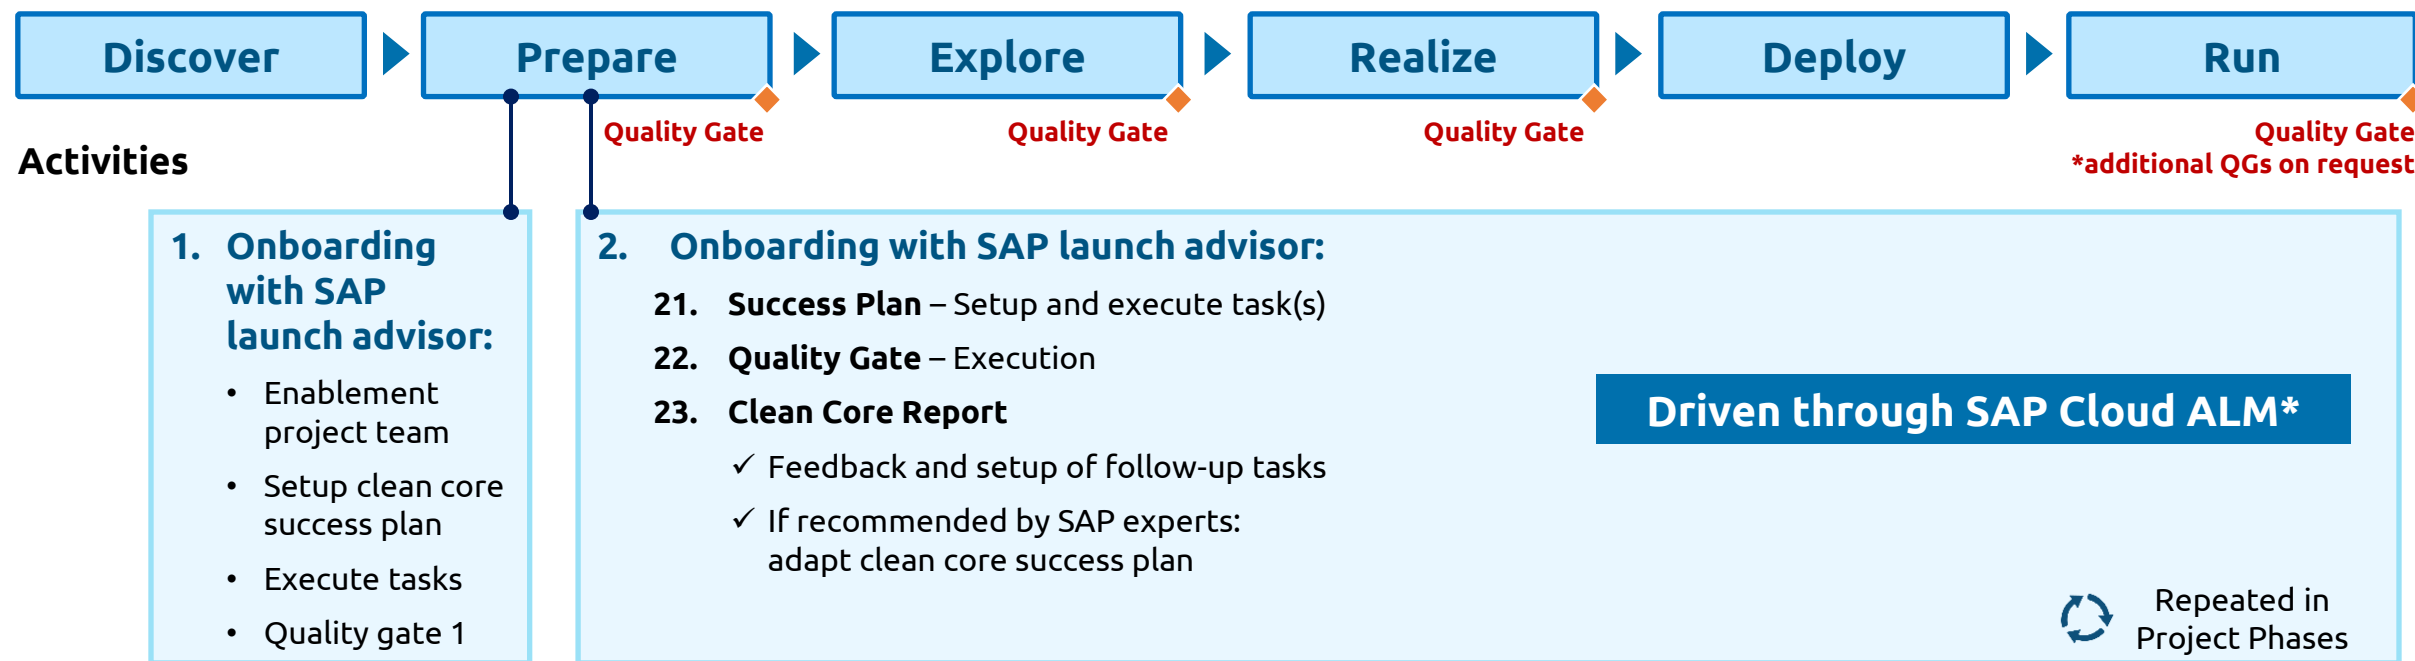

APPENDIX

Quality gate execution

Enhanced with clean core principles

With **clean core activities** and **quality gates** as checkpoints, the RISE with SAP Methodology enables improved business agility, shorter upgrade cycles, and faster adoption of innovation and new functionality.

The clean core success plan leads through the customer value journey.
Clean core quality gates (QG) support adherence to the clean core success plan and the project KPIs.

Development Guidelines on Keeping the core 'Clean' (1)

The following guidelines should be considered for keeping the code clean.

- **Keep the core clean:**
 - Use configurations and vendor-delivered best practices and guidelines for customizing
 - Use a de-coupled object-oriented API first design and development approach.
 - Custom Design and Development should leverage a Cloud-First mindset.
 - Implicit Enhancements and Core Modifications are to be avoided at all costs.
- **Procedural programming must be avoided and used only after eliminating all other development options.**
- **Use Low Code /No Code tool to accelerate the fulfillment of business requirements with side-by-side extensions and custom applications developed outside the core**
- **Use best practices and naming standards for development:**

We use vendor-delivered best practices, Naming Standards, and Deployment framework for the naming of packages, object names, and coding.

- **Use a consistent naming convention** - This will make your code easier to read and understand.
- **Comment your code** - This will help you and others understand what your code is doing.
- **Use proper indentation** - This will make your code easier to read and understand.

Development Guidelines on Keeping the core 'Clean' (2)

- **Break your code into small, manageable functions. - :**
 - This will make your code easier to read, understand, and debug.
- **Use variables to store values:**
 - This will make your code more readable and maintainable.
- **Use loops and conditional statements to control the flow of your code.:**
 - This will make your code more efficient and easier to read.
- **Use exception handling to deal with unexpected errors:**
 - This will make your code more robust and reliable.
- **Test your code thoroughly:**
 - This will help you identify and fix any errors in your code..
- **Document your code:**
 - This will help others understand how your code works.
- **Use version control:**
 - This will help you track changes to your code and revert to previous versions if necessary.
- **Keep your code up to date. -**
 - This will help you take advantage of new features and bug fixes.
- **Use**
 - SAP-Delivered Transport Management System for Version Management of ABAP Code and deployment
- **Use a Tool like GIT**
 - To have a repository of Non-ABAP objects with Version Management

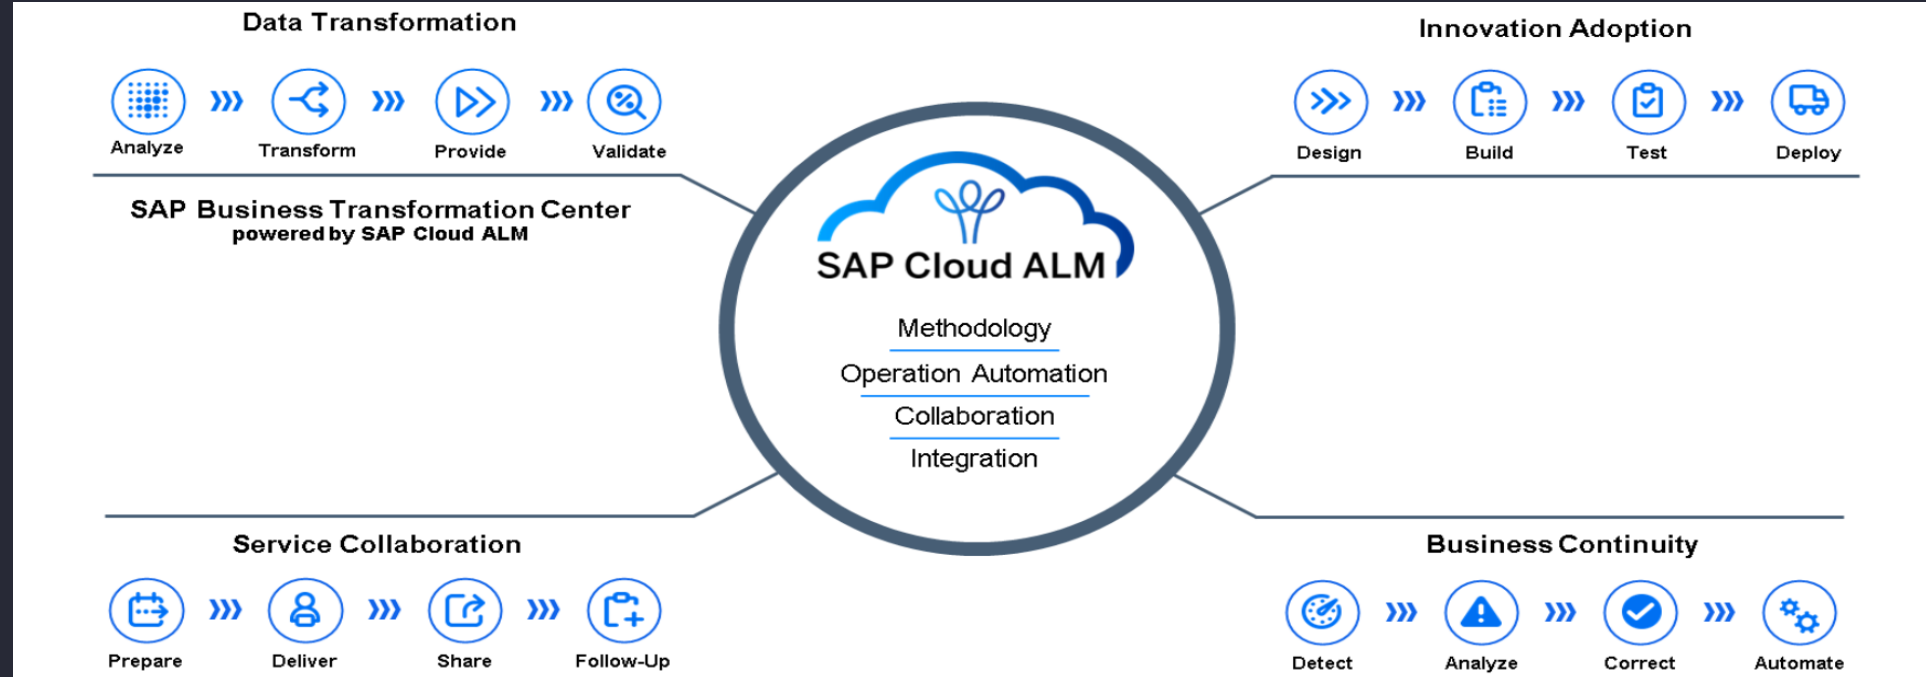

SAP Cloud ALM as an Integral Part of the RISE with SAP Methodology which supports Accelerate time-to-value , Ensure Business Continuity and guide to Adopt Clean Core

SAP Cloud ALM helps our customers to implement and operate intelligent cloud and hybrid business solutions. It is also the foundation for the RISE with SAP Methodology.

Our customers benefit from an out-of-the-box, native cloud solution, designed as the central entry point to manage their SAP landscape. SAP Cloud ALM provides essential implementation capabilities to manage all implementation, testing and deployment activities of SAP S/4HANA Cloud.

SAP Business AI in RISE with SAP - Value Framework

- **Embedded across the portfolio**
- Enable intelligent processes [SAP Discovery Center](#) / [AI Catalog](#)

Use Case Value Playbook Available within the Content Discovery area [here](#)

Joule Commercialization & Consumption AI / **How are SAP AI Units Measured?** [SAP AI Service List](#)

For more details please refer :

[SAP Business AI for RISE.pptx](#)

SAP AI Unit : Estimate and Track : [AI Unit Estimator](#)

For all RISE contracts (except RISE PTO) that were signed after 15th July:

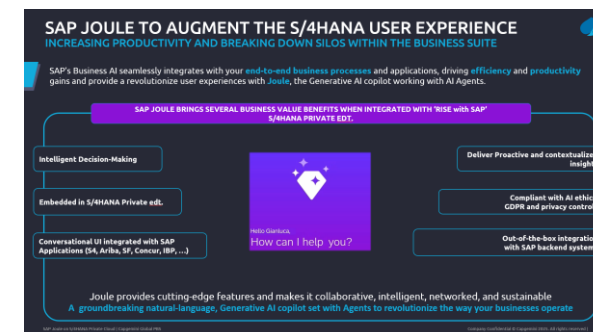

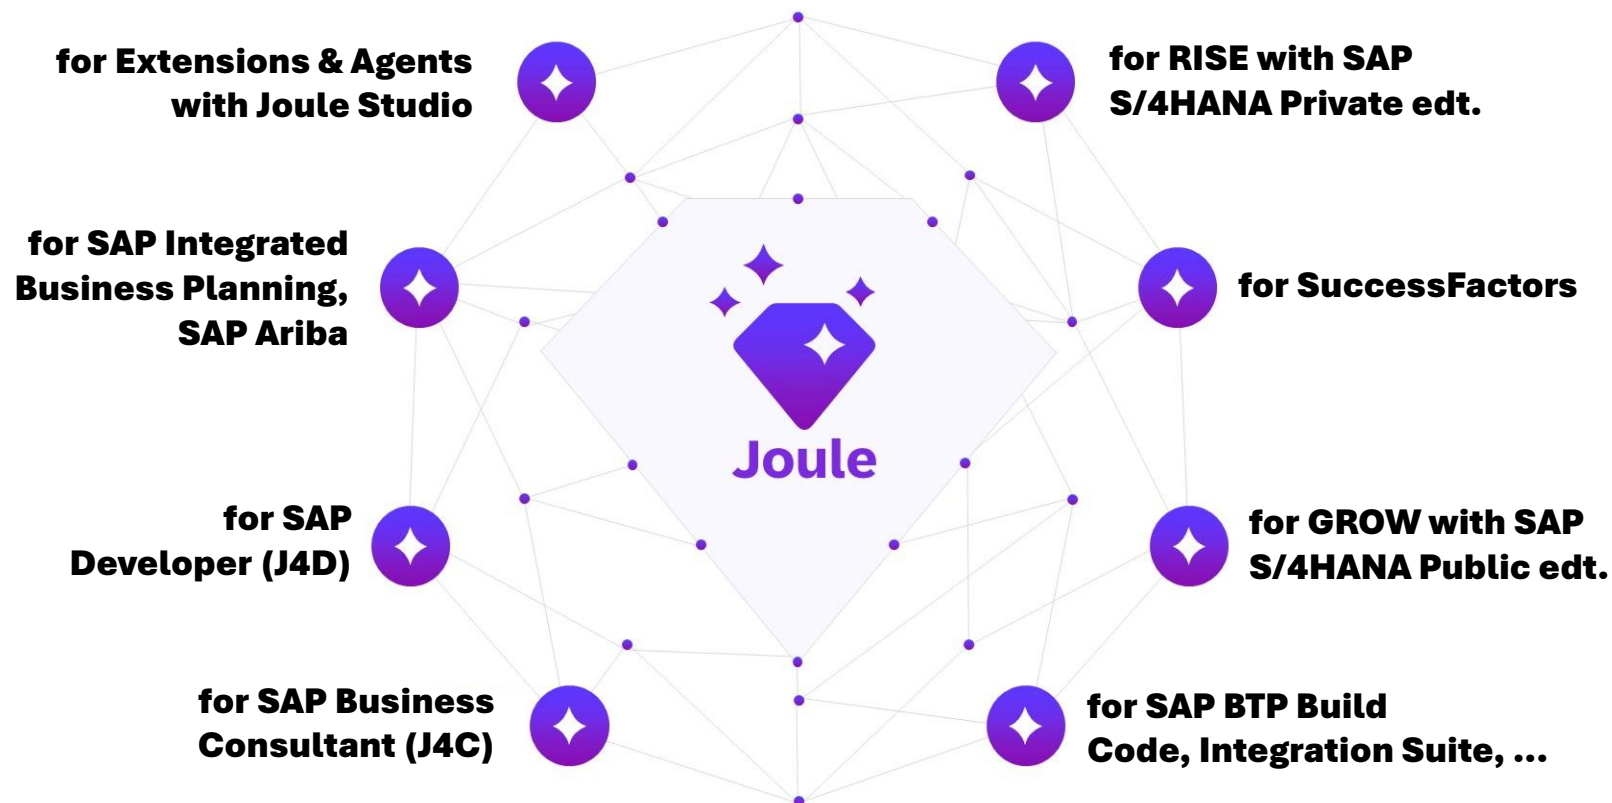

- All customers in all RISE editions get 2500 free Joule messages per FUE per year.
 - The AI T&Cs as well as Joule provisioning is included in the RISE contracts / fulfilment.
- Customers of RISE premium (SKU 8018418) have a mandatory auto attach of 2500 AI Units.
 - AI Units will appear as a separate line item in the BOM.
 - The AI T&Cs are anyways already included in the RISE contracts so no additional paperwork here too

Customers of RISE premium plus (SKU 8018501) receive free AI Units depending on the tier they are in: see the table (Tier & AI Units) right hand side. All paperwork is covered with the RISE contracts, too.

Tier	AI Units
1	20.000
2	30.000
3	90.000
4	150.000
5	200.000
6	250.000
7	275.000
8	450.000
9	900.000

For all contracts before 15th July:

- All “old” RISE customers also get the entitlement of 2500 free Joule messages.
- To ensure they signed the AI T&Cs and they get the Joule provisioning, they have to sign the so called 0\$ SKU for Joule: 8017178. This SKU is an addendum to their existing contract.

Rise project team to be 100% certified on 4 Roles – refer to the table below for Roles and certification codes (any one certification per Role)

Capgemini

Topic Area / Role	Description	Certification
Project Management: SAP S/4HANA Cloud Private Edition & SAP Activate	Manage all communications, standard implementations, and industry solution projects from start to finish.	• SAP Certified Associate - Project Manager - SAP Activate: C_ACT
		• SAP Certified Specialist - SAP S/4HANA Cloud Private Edition: E_S4CPE
ABAP and SAP Cloud Development: ABAP Cloud, SAP Cloud Programming Model, SAP BTP Solution Architecture, and AI	Design and execute extension applications using the side-by-side extensibility concept on SAP BTP (e.g., ABAP Cloud, SAP Build). Develop apps with the ABAP RESTful Application Programming Model.	• SAP Certified Associate - Back-End Developer - ABAP Cloud: C_ABAPD • SAP Certified Professional - Solution Architect - SAP BTP: P_BTPA* • SAP Certified Associate - Backend Developer - SAP Cloud Application Programming Model: C_CPE • SAP Certified Associate - SAP Generative AI Developer: C_AIG*
Integration Development	Connect SAP and non-SAP systems using SAP BTP Integration Suite.	• SAP Certified Associate - Integration Developer: C_CPI
Low-Code NoCode / Pro-Code Development	Provide expert guidance on overall SAP technology, architecture, deployment, and governance.	• SAP Certified Associate - Low-Code/No-Code Developer - SAP Build: C_LCNC
Enterprise Architecture: SAP Enterprise Architecture Framework, SAP LeanIX	Provide expert guidance on overall SAP technology, architecture, deployment, and governance.	• SAP Certified Professional - SAP Enterprise Architect: P_SAPEA • SAP Certified Associate Enterprise Architecture Consultant - SAP LeanIX: C_LIXEA
Business Transformation Management :SAP Signavio	Analyze, enhance, and design business processes with a focus on the customer experience	• SAP Certified Associate - Process Management Consultant - SAP Signavio: C_SIGPM • SAP Certified Associate - Process Data Analyst - SAP Signavio: C_SIGDA • SAP Certified Associate - Business Transformation Consultant: C_SIGBT
